

# Configuring Concur

Configuring Concur for SSO enables administrators to manage their users using NetScaler. Users can securely log on to Concur using their enterprise credentials.

To configure Concur for SSO through SAML, follow the steps below:

1. Send an email to the SAP Concur support team to enable SAML 2.0 for your account and complete SP-initiated SSO.

The support team responds with the required information to help you in setting up SSO for your organization.

2. Note the Assertion Consumer Service URL and other values to use the values while configuring NetScaler for SSO.
