

Configuring Flowdock

Configuring Flowdock for SSO enables administrators to manage their users using Citrix Gateway. Users can securely log on to Flowdock using their enterprise credentials.

To configure Flowdock for SSO through SAML, follow the steps below:

1. In a browser, type the URL, <https://www.flowdock.com/help> and press **Enter**.
2. You need to contact the Flowdock support team.
3. You need to provide the IDP metadata to the Flowdock support team.

The Flowdock support team configures SSO settings and provides you ACS URL and SP-initiated URL.

Note: The URL for SP initiated flow is same as the Flowdock login URL.
